

Correcting Colour Casts

Correcting the cast:

Cast	Correction
Blue	Remove yellow
Green	Remove Magenta
Red	Add Yellow & Magenta
Yellow	Add Yellow
Magenta	Add Magenta
Cyan	Remove Yellow & Magenta

Important note

You can only see one cast at any one time but this may be biased towards another colour that is hidden beneath the dominant cast.

If you have a red cast which is leaning towards Yellow, to correct the red cast you would normally add equal amounts of yellow and Magenta. By adding more yellow than magenta you can succeed in correcting the underlying cast at the same time.
